AIUB COURSE SOLUTION

Lecture 1

System

* A system has a specif set of objectives
* Component of a system work together to achieve objectives within a limited boundary.
* components are given a specific set of tasks or responsibilities. → can perform independently.
* Components $\xrightarrow[\text{Communication}]{\text{relate}}$ with each other.
  ↳ based on type of relationships.
* Components communicate → on basis to the output.

AIUB COURSE SOLUTION

Quality of a System

* Objectives and components must have be well defined and specific responsibilities.
* Communication among components should be as minimum as possible.

Model

* Modeling is a proven and well-accepted engineering technique.
* Unsuccessful projects fail in their own unique ways.

ACS LIVE CLASS & VIDEO TUTORIAL

* Successful project succeed in same way are alike in many ways.

* One common thread is the use of modelling.

* We do model so that we can better understand that the system we are developing.

* Model → simplification of reality

Benefits : modelling → 4 aims.

i) Visulizing system.

ii) Specify the structure or behaviour, of system.

iii) template → guides us in constructing a system.

AIUB COURSE SOLUTION

* Document the decisions

Limitation of Human Ability

* We build models of complex systems because we can not comprehend such a system in its entirety.

* The larger and more complex the system, the modeling becomes more important and focused on aspect at a time.

AIUB COURSE SOLUTION

Principal of Modelling

* The choice of what model to create has a profound influence on how a problem is attacked and how a solution is shaped.

  i) choose models intelligently

  ii) the right models will illuminate the wicked development problems

* Every model may be expressed at different levels a precision.
  ↳ depth
